2. Locate your ***EdenVaccination.xlam*** file
3. Select it
4. Click **OK**

Step 5 Activate it

Make sure the checkbox next to your add-in is **Checked**

Click **OK**

Overview

This Add-in helps you track and analyze child vaccination schedules using VBA

You only need

1. Child's Date of Birth(DOB)

The system automatically calculated:

- Age in Weeks and months
- Vaccine due now
- Next Vaccines
- Delay in Vaccination

The system has been built by Newton Ojwang' Powered by EdenCity.

GetChildAgeInWeeks

Purpose

- Calculate the child's age in weeks from the Date of Birth

Formula

=GetChildAgeInWeeks(DOB)

Example

=GetChildAgeInWeeks(A2)

IF A2=2025-01-01, Results will be: 11

Note

- It works with a single cell or range

If invalid date it will return "**Invalid Date**"

GetChildAgeInMonths

Purpose

- Calculate the child's age in months from the Date of Birth

Formula

=GetChildAgeInMonths(DOB)

Example

=GetChildAgeInMonths(A2)

IF A2=2025-01-01, Results will be: 2

When to use

For vaccines scheduled by months:

- MR(Measles)
- Yellow Fever
- Vitamin A

GetDueVaccine

Purpose

- Showa vaccines that are due now based on the child's Age

Formula

=GetDueVaccine(DOB)

Example

=GetDueVaccine(A2)

Output:
OPV1,PENTA1,PCV1

How to use

- Uses age(Weeks/months)
- Matches with the vaccination schedule
- Returns vaccines expected **at current age**

Notes

- Does NOT check if vaccine was already given
- Focuses only on **age eligibility**

GetNextVaccine

Purpose

- Shows the next upcoming vaccine(s)

Formula

=GetNextVaccine(DOB)

Example

=GetNextVaccine(A2)

Output:
OPV1 at 10 weeks

How it works

- Checks current Age
- Predicts next stage in schedule

Use Case

- Planning upcoming visits
- Informing caregivers

GetVaccineGapInWeeks

Purpose

- Measures how many weeks a vaccine was delayed

Formula

=GetVaccineGapInWeeks(DOB,VaccinName,VaccinationDate)

Example

=GetVaccineGapInWeeks (A2,"PENTA1",B2)

Where:

- A2 is DOB
- B2 is Date PENTA1 was given

Output:

5

Meaning

The vaccine was given 5 weeks late

Possible Outputs

- Number-→delay in weeks
- "Not Given"→no date recorded
- "Invalid Date"→Incorrect
